SPSS: Binning (visual)

This document will show how to bin a scale variable using the visual binning. The example file used is Holiday Fair.sav, available at the companion website: [http://PeterStatistics.com](http://PeterStatistics.com).

A video showing the steps described can be found at: [https://youtu.be/NNIpi3nEFlk](https://youtu.be/NNIpi3nEFlk)

<table>

SPSS: Binning (using visual binning)

1. Click in the menubar on **Transform**
2. Click on **Visual Binning**...
3. Click on the scale variable(s) you want to bin
4. Click on **...**
5. Click on **Continue**.

6. Click on **Reset**.

7. Enter a name for the binned variable (cannot start with a number, and cannot contain spaces).

8. Check if you want the bins to be included or excluded.

9. Note the minimum and maximum value of the scale variable.

10. Click on **Make Cutpoints**.
11. Three main options are available to create the bins. Either by the width interval, based on percentiles, or based on standard deviations. In the example I’ve chosen to use the Equal width intervals.

12. Enter the value at which the first cutpoint should be placed.

13. Enter either the number of cutpoints or the width (as soon as you enter one, the other will be filled out).

14. Click on Apply.

15. Click on Make Labels.

16. Click on OK.

17. Click on OK.

The binned variable will be added at the end of your variables list. You can now for example generate a frequency table of the binned variable.
